

Nikspector

Overview

A custom Inspector extension that enhances the Unity Editor with tabs, foldouts, buttons, and improved serialization — all driven by simple C# attributes. Tabs organize fields and buttons into named groups at the top of the Inspector. Foldouts collapse sections for a cleaner layout. The [Button] attribute turns any method into an Inspector button.

[BetterSerializer] exposes static, const, readonly fields, and properties that Unity normally hides. Works on both MonoBehaviour and ScriptableObject components.

Originally created for personal game development projects and later prepared for public release.

Notes

- Add using Nikson; at the top of your scripts to use the Inspector attributes.
- Attributes: [Tab], [Foldout] / [FoldoutEnd], [Button], [BetterSerializer], [BetterHeader].
- An example scene is included with everything set up.
- The package is fully editor-only and does not affect builds.
- Only Unity 6 has been officially tested, but earlier versions should work.
