Introduction

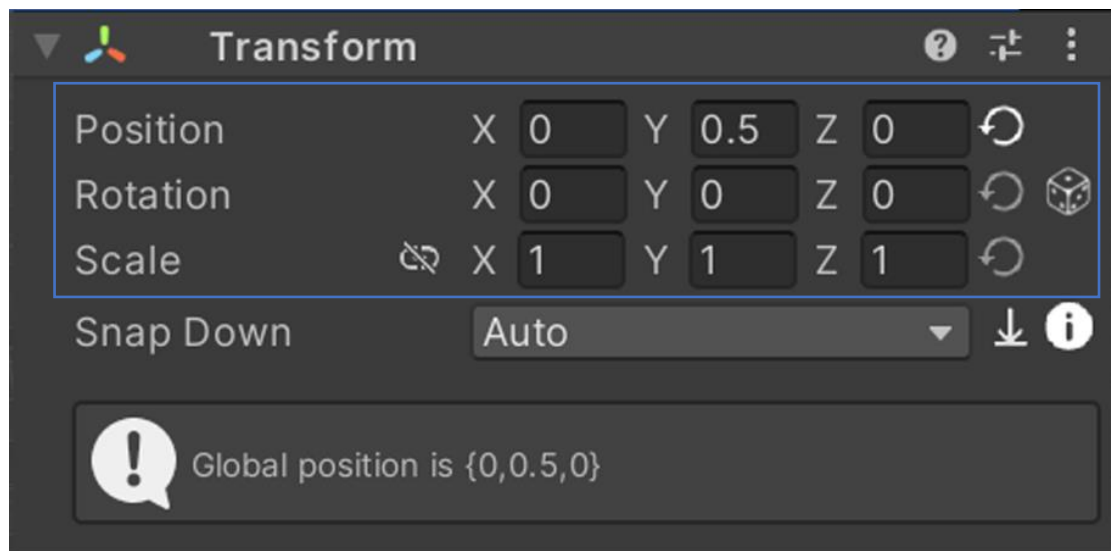

Thank you for using our product! – If you like it, please rate it.

This tool replaces the transform panel of unity, and adds shortcut buttons while maintaining the functions of the original panel.

Check out our other products on the [Unity Asset Store](#) and subscribe to our Newsletter!

If you have any issues, please contact us: 416803633@qq.com

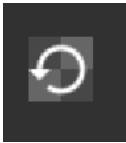

Enhancement

A reset button and a random button are added to the transform panel provided by unity.

◆ The position, rotation and scale can be reset separately by the button on the

right side of each field.

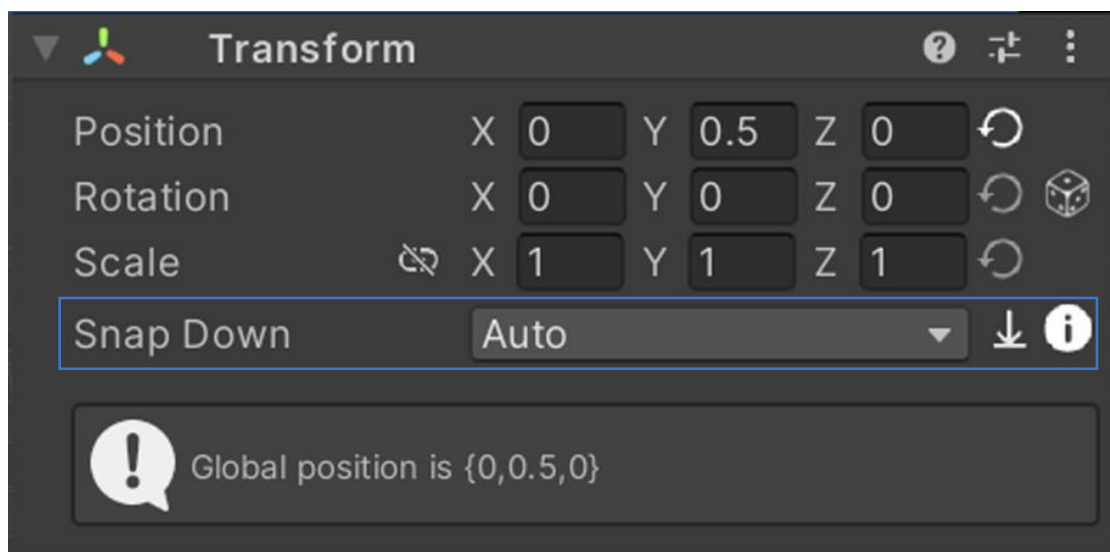

By clicking this button, the data of each field can be reset separately.

- ◆ Set a random rotation from small buttons to the right of rotation field.

By clicking this button, the rotation will be filled with random data.

New Features

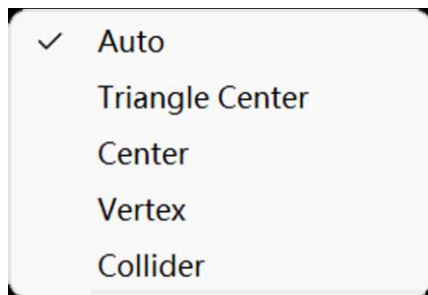

Snap down provides a downward snap function, which can be snap to the gameobject below the selected transforms through the selected option.

- ◆ Snap the selected transforms to the downward gameobject.

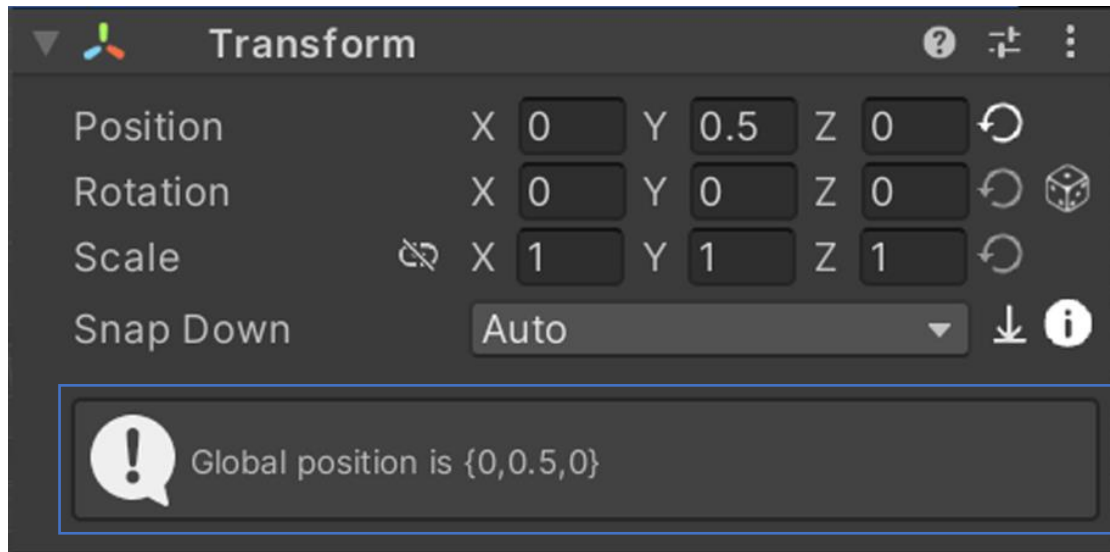

By clicking this button, the selected transforms will snap to downward gameobject.

Snap down option

- ◆ Auto - Use the outermost vertex in the following options.
- ◆ Triangle Center - use the center point of the outermost triangular surface.
- ◆ Center - use game object center.
- ◆ Vertex - use outermost vertex.
- ◆ Collider - use the outermost of the collider.

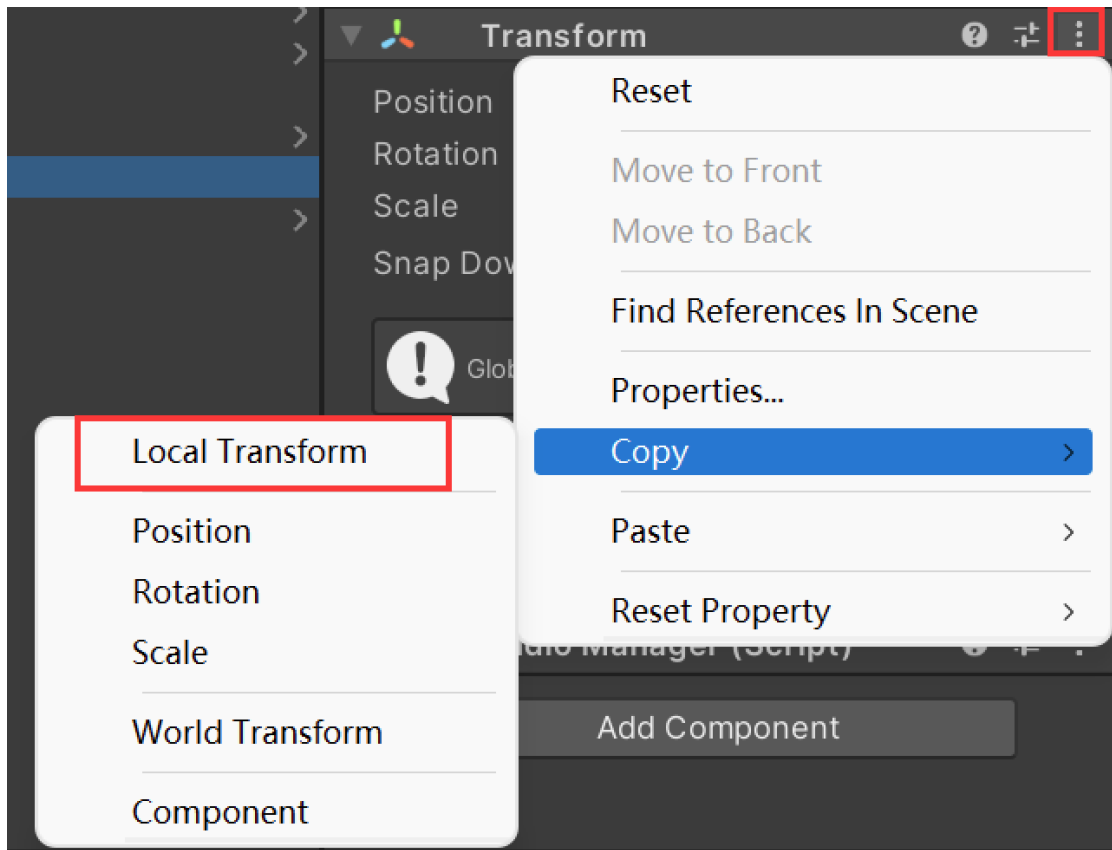

◆ Show global position

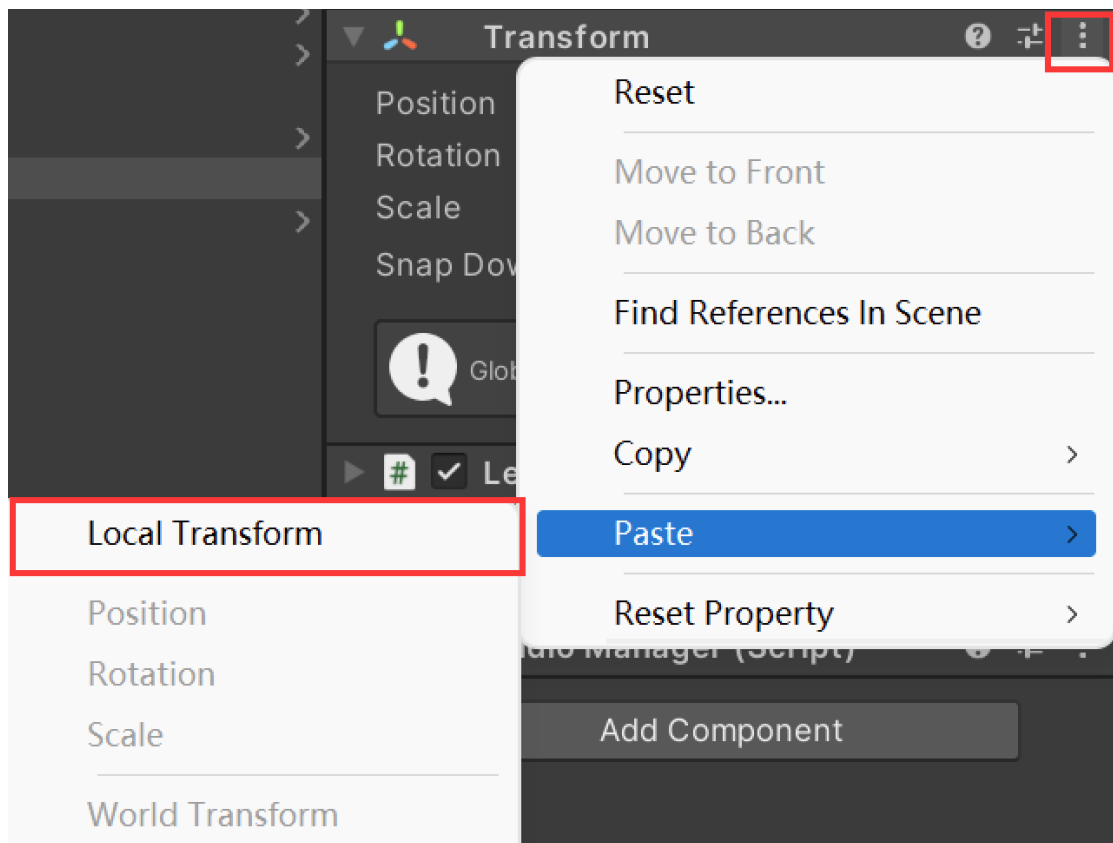

You can check the world position of the transform at any time.

◆ Copy and paste local Transform from the Transform's context menu.

Sometimes you need to copy the local transform to other transform. This plugin provides this function. You can do that by following the steps below.

Click the dropdown menu in the upper right corner of this panel and select Copy/Local Transform.

Select the dropdown menu in the upper right corner on the target gameobject transform panel where data needs to be pasted, and press Paste/Local Transform.
